

PostgreSQL Database Manager

A configurable PostgreSQL database system with a user-friendly frontend. Users can add and configure databases via UI, with credentials securely stored on the device. The system allows full data interaction—viewing, editing, querying—and is easily adaptable for projects like e-commerce, e-learning, or task management.

Features

-  **Database Configuration Management:** Add, update, and delete PostgreSQL database connections via UI
-  **Secure Credential Storage:** Database credentials are encrypted and stored locally on the device
-  **Connection Testing:** Test database connections before saving
-  **Data Viewing:** Browse tables, view schema, and explore data with pagination
